

The Ultimate Off-Grid Water System

Endless Clean Water Supply

Go further.

Stay Longer.

No Limit on Luxury.

Experience the world's first on-board autonomous water system that generates and filters its own clean drinking water and unlimited supply for showers, cooking and laundry. With this game-changing water system, the Counterstrike Vincere delivers the most advanced, self-sustaining caravanning water solution in the world

Feel complete off-grid independence with the self-sustaining system that combines fresh water generation, reverse osmosis recycling and advanced filtration. This innovative setup ensures a limitless supply of clean, drinkable water and hot water on-demand without worry about storage or scarcity, even in the most remote locations.

The Future of Off-Grid Water Security

- ★ Unlimited Fresh Water Supply
- ★ True Off-Grid Independence with no need to rely on external refilling sources
- ★ Minimal Maintenance through grey water disposal
- ★ Sustainable and Eco-Friendly as the system dramatically reduces water wastage and environmental impact
- ★ Pure and safe, contaminant-free drinking water

Grey Water Tank

The low maintenance system that dramatically reduces water wastage

- ▶ 110L capacity hold before it is purified and replenishes the 150L fresh water tank
- ▶ Disposal only needed after 1500L of use

Constant Fresh Water Generation

The advanced filtration and recycling system secures a clean, sustainably supply

- ▶ Produce up to 150L of new usable fresh water per day
- ▶ No need to rely on external refilling sources
- ▶ Multi-stage Reverse Osmosis filtration removes impurities, bacteria, chemicals and dissolved solids ensuring contaminant-free water

How It Works:

- ▶ Fresh Water Generation - The system extracts moisture from the air, producing up to 150L (1500 litres effective use in the recycling system) of fresh, potable water per day, ensuring a steady supply in any climate. The newly generated water goes into a 50L drinking water tank, which is plumbed to the sinks so that you can drink fresh filtered water without the thought that someone showered in it.
- ▶ Reverse Osmosis Recycling - The 110L grey water tank captures used water, which is then purified and returned to the 110L fresh water tank (separate to the 50 litre drinking water tank). It's so clean it could go straight back into the drinking water tank, but we want everyone to feel completely at ease. After all, our focus is on delivering an ultra-luxury adventure, where every detail is designed for comfort and peace of mind.
- ▶ Continuous Water Supply - With ongoing generation and recycling, this system provides an effective 1500L+ of usable fresh water, extending travel time and reducing reliance on external refills. 1500L+ per day through atmospheric water generation + continuous recycling

Unlimited Fresh Water Supply

Extend your off-grid travels with the peace of mind that you can truly go anywhere

- ▶ 1500L per day through atmospheric water generation and continuous recycling
- ▶ 150L onboard Fresh Water Tank that is continuously replenished
- ▶ 50L drinking water tank
- ▶ Pure, safe drinking water supply through multi-stage purification system
