our X-range

Kokoda: Generator-Less by Design

Other vans are still stuck in the past — framed vans with poor insulation, big vents that leak dust, messy wiring that wastes solar, and power-hungry aircons that force you to run a generator. They're really generator vans, no matter what they bolt onto it.

Kokoda's X-Ranges are different. We design the whole system as one — body, insulation, energy, heating, cooling, and storage — so everything works in harmony. The result? A van that feels effortless, no matter how harsh the conditions.

Better Insulation

Our bonded sandwich panels, and fully insulated hatch doors keep the cabin warm in winter and cool in summer. In the XG range, the cabin is fully gas-free — no gas ventilation cut-outs, no insulation gaps, no dust creeping in. Just quiet, steady comfort.

Smarter Energy Flow

Shorter, direct cabling means less loss from solar to batteries. What you collect, you keep — making every ray of sunlight count. Airflow and heat extraction around the battery management components, to ensure they run efficiently in the hottest climates.

Efficient Climate Control

We choose air conditioners that sip power, not gulp it. In the XG range, the ducted split system

uses just 700W an hour — so you can run it longer, sleep cooler, and wake warmer without draining your bank.

Balanced Energy Sources

Where others rely on just electric or diesel, Kokoda uses all three: Gas for hot water + outdoor cooking (outside the cabin, keeping it gas-free).

Diesel for reliable heating.

Electric (solar + lithium + inverter) for everything inside: aircon, appliances, lighting, comfort.

The Outcome

With Kokoda, what most people see as endurance — blistering heat, biting cold, or days without sun — becomes simple, quiet, and comfortable. You spend more time off-grid, with less management and far less generator noise.

That's why we call ours generator-less caravans.

Everyone else? They're still making generator vans.

pushing boundaries, on and off the road.

XC range - climate control & comfort in every season

The XC Range is Kokoda's mainstream choice built for those who want to travel further, stay longer and feel comfortable in any climate. Whether it's weekends away, annual holidays or months-long journeys, this is the range that adapts to your lifestyle.

the mission

To deliver true comfort and capability across every kind of adventure, in every season.

the features that enable it

Composite sandwich panel construction provides superior insulation and dust control, meaning the cabin holds temperature without draining power. A balanced solar and lithium system, paired with smart airflow and heating/cooling options, keeps life on the road simple and comfortable. Styled with Kokoda's rugged design cues, the XC Range blends toughness with everyday ease.

the experience

The XC gives you the confidence to roam widely, without worrying about conditions. From coastal holidays to inland journeys, from hot summers to cool southern nights, it adapts to you. It's freedom made comfortable, all year round.

why choose the XC range?

Engineered to keep you comfortable through Australia's toughest conditions. The perfect balance of strength, insulation, and seasonal comfort.

engineered for comfort in every climate.

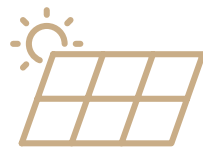

XC2 range - extended adventures & remote comfort

The XC2 is designed for **travellers who want to explore further and stay longer** — beyond civilisation and into journeys that stretch for months. It's at home on red desert tracks, under the heavy heat of summer skies, or in the cool shade of riverbank camps. This is where strength and comfort meet, creating a van that lets you immerse yourself in remote places while still feeling at home.

With **airbag suspension**, the XC2 smooths corrugations and makes levelling at camp effortless. The **advanced energy system** has off-grid electrics, gas and diesel all to power everything you need in silence, keeping the cabin cool at night and your essentials running without the hum of a generator. A **serious front toolbox** gives you the space for recovery gear, tools, and the extras that make long stays practical.

What sets the XC2 apart is its balance. It's tougher, more capable, and more independent than a generator van, but without the complexity or heft of a full-time rig. That means you can go further, stay longer, and enjoy more freedom, without feeling weighed down. For couples, families, or travellers chasing **extended off-grid adventure**, the XC2 makes the wilds more comfortable, so you never have to cut a trip short.

why choose this layout?

A family caravan layout is designed with togetherness and practicality in mind, ensuring there's space for everyone to relax, sleep, and enjoy the journey. The right layout balances comfort with functionality.

comfort in every layout.

Water Tank

More water. More freedom.

Expand your fresh water capacity by 110L with an underbody-mounted tank protected by a durable stone guard.

key features

- Each additional tank provides 110L of fresh water, allowing you to stay off-grid for longer without needing to refill.
- Travel to more remote destinations knowing you have extra water for drinking, cooking, showering and washing up.
- Mounted securely underneath the caravan, each tank is protected by a stone guard to help withstand rough off-road conditions.

specs

Impact on Tare (empty)	25kg
Impact on Ball Weight	0kg

why this upgrade matters

More water. More freedom.

Adding an extra 110L fresh water tank gives you the confidence to venture further and stay longer. Protected by a stone guard and neatly mounted underneath the caravan, it's a practical upgrade that expands your off-grid capability while adding just 25kg to the caravan's tare weight (empty). It's a simple way to make every adventure more flexible.

confidence in every journey.

Grey Water Tank with Bypass (110L)

Stay Compliant. Stay Clean. Camp Anywhere.

A grey water tank allows you to collect wastewater from sinks and showers, making your van compliant with many caravan parks and environmentally sensitive locations.

key features

- 110L grey water tank
- Mounted underneath van
- Protected with galvanised shield/cover
- Integrated bypass system
- Tank sensor viewed on Victron display

key notes (considerations)

- Requires manual management of bypass (depending on location)

benefits to you

- Access to more caravan parks and regulated sites
- Environmentally responsible waste management
- True self-contained capability
- Flexibility to camp in more locations
- Monitor grey water levels through Victron display

bypass functionality

- When in caravan parks, water can bypass the tank
- Direct drainage to sullage hose connection
- No need to fill and empty tank unnecessarily

why this upgrade matters

A 110L Grey Water Tank gives you greater flexibility to camp in more locations while staying compliant with caravan park and environmental requirements. With an integrated bypass system, you can switch between collecting grey water or draining directly to a sullage connection when permitted.

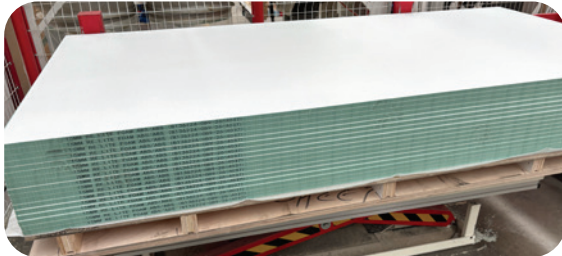

A tank sensor viewed through the Victron display allows you to easily monitor grey water levels while travelling. Protected underneath the van with a galvanised shield, it adds true self-contained capability for cleaner, more responsible travel.

confidence in every journey.

XCore Lightweight Cabinetry

Reduce Weight. Increase Capability. Travel Smarter.

Kokoda's XCore Lightweight Cabinetry is engineered to significantly reduce tare weight while maintaining strength, durability, and premium finish. This isn't about removing strength—it's about using smarter materials to maximise your van's capability.

key features

- Advanced XPS foam core board (XCore) construction
- ABS laminate surfaces for superior durability
- PUR edge banding adhesives for long-term performance
- Strategic use of timber where strength is required
- Engineered specifically for off-road and off-grid use

benefits to you

- Reduce tare weight by approx:
 - 80 – 120kg savings (18-21ft)
 - 120 – 180kg savings (21-24ft)
- Increased payload capacity
- Greater flexibility to add options without exceeding limits
- Helps avoid pushing tow vehicle limits (critical near 3.5T)
- Strong, durable cabinetry built for harsh conditions

key notes (considerations)

- Hybrid construction (not fully timberless—by design for strength)
- Weight savings vary depending on van size and layout

why this upgrade matters

Weight isn't just a number – it directly impacts how your van tows, what you can carry, and how far you can go.

XCore Lightweight Cabinetry reduces tare weight without compromising strength, giving you more usable payload for gear, water, and upgrades. It also helps keep you within towing limits – especially critical around 3.5T – improving safety, efficiency and overall performance on the road.

It's a smarter way to build, giving you more capability without the trade-offs.

confidence in every journey.

External Utility Hatch (Picnic Table) with Fold-Down Bench & Water Outlet

This upgrade transforms a standard tunnel boot or side hatch into a practical outdoor utility station. Featuring a fold-down bench, integrated water outlet, and power access, it creates a clean, usable space right where customers need it — outside the van.

key features

- Fold-down door converts into a solid outdoor bench/table
- Integrated external water outlet with hose connection
- 240V power point inside hatch for appliances
- Cable-supported door for strength and stability
- Clean, sealed internal cavity with storage sections
- Compatible with collapsible sinks or washing tubs
- Weather-protected hatch with secure sealing

optional add-ons

- Collapsible sink or wash tub
- Additional lighting inside hatch
- Quick-connect hose fittings
- Storage dividers or organisers

typical use cases

- Washing dishes or cookware
- Filling kettles or water containers
- Cleaning gear or muddy items
- Kids' wash station or general campsite utility area

why this upgrade matters

A simple but highly effective upgrade that turns a storage hatch into a multi-use outdoor workstation — improving everyday usability and enhancing the off-grid experience.

- Creates an outdoor kitchen/cleaning station without adding bulk
- Keeps mess, water, and dirt outside the van
- Adds functional value to existing space
- Improves usability for off-grid and long-term travel
- Perfect for families, travellers, and off-road setups

confidence in every journey.

Clesana C1 - The sealing toilet.

Modern, Hygienic. No Chemicals Required.

The Clesana C1 toilet replaces traditional chemical systems with a sealed bag solution—offering a cleaner, more flexible, and environmentally conscious alternative.

key features

- No smell
- No water / chemicals
- Rotating / swivel base
- Premium finish, solid. Swiss made
- Can handle vomit, diarrhoea & food scraps
- Large toilet 'bowl' with no splashback

costing note

- Replaces standard Thetford toilet
- Pricing reflects upgrade difference only

benefits to you

- Improved hygiene
- Easy waste disposal
- No more 'dump point detours'
- Low maintenance = easy on short trips

key notes (considerations)

- Ongoing consumables costs
- Disposal rules vary by location (same as nappies/dog poo bags)
- Optional extras available

why this upgrade matters

The Clesana C1 is engineered and manufactured in Switzerland to solve the common frustrations of traditional caravan toilets. Unlike cassette & composting toilets, it requires very little maintenance and has no smell.

The C1 hygienically seals your waste in a high barrier liner to create tough sealed bags. The result is a reliable toilet system that requires no water, no chemicals and can handle all human waste and toilet paper without needing to separate liquids and solids.

confidence in every journey.

stronger, lighter & built for off-road conditions

Kokoda's Frameless Bonded Sandwich Panel Construction

When choosing a caravan built for off-road and corrugated roads, construction quality matters.

That's why Kokoda Caravans use advanced frameless bonded construction, replacing outdated screw-fix methods with high-strength chemical bonding that delivers exceptional durability, stability, and long-term reliability.

Unlike traditional mechanically fixed caravans, which rely on screws that loosen over time, our frameless sandwich panel design is bonded together as a single, high-strength structure, ensuring a rattle-free, low-maintenance caravan designed for tough Australian conditions.

Why Is bonded construction better than screws?

1. How Does Bonded Construction Improve Caravan Strength?

Our frameless bonding process chemically fuses the walls, roof and floor into one seamless structure, eliminating weak points caused by screws and rivets that shift and loosen over time.

This results in a caravan that's stronger, more rigid and better at absorbing shocks from rough terrain.

2. What Makes It Ideal for Off-Road and Corrugated Roads?

- Vibration resistance – Bonded construction absorbs impacts, reducing internal movement and preventing fittings from coming loose.
- Less maintenance – No screws to tighten or check after rough road travel.
- Superior structural integrity – Ensures cabinets, walls and joins stay firmly in place, preventing internal damage.

3. Is Bonded Construction More Reliable Than Screws?

Yes. Traditional caravans use hundreds of screws and rivets, which can:

- Loosen over time, leading to squeaks, rattles and panel separation.
- Cause leaks or dust ingress as gaps widen with movement.
- Require ongoing maintenance, tightening screws after long trips.

With Kokoda's bonded structure, none of these are an issue—giving you a caravan that's engineered to last with minimal upkeep.

4. Does Bonding Improve Insulation and Weatherproofing?

Absolutely. Our frameless sandwich panel design creates a fully sealed, dust-resistant and highly insulated structure. This means:

- Loosen over time, leading to squeaks, rattles and panel separation.
- Cause leaks or dust ingress as gaps widen with movement.
- Require ongoing maintenance, tightening screws after long trips.

seamless strength that lasts

Bonded construction creates a seamless, rock-solid body that's stronger, lighter, and built to handle the roughest Australian tracks. By bonding panels instead of using screws, we eliminate weak points where water or dust can sneak in, giving you a caravan that stays rigid, weather-tight, and adventure-ready for years to come.

bonded for unmatched durability.

sandwich panel vs. meranti frame vs. aluminium frame. which is best?

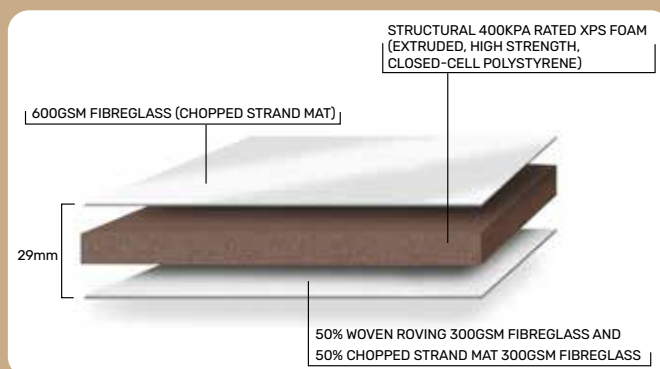

Choosing the right caravan construction method is critical for durability, strength, weight, and long-term reliability.

Here's how Kokoda's frameless bonded sandwich panel construction compares to traditional Meranti timber frame and Aluminium frame caravans.

FEATURE	FRAMELESS BONDED SANDWICH PANEL	ALUMINIUM FRAME	MERANTI TIMBER FRAME
Strength & Durability	✓ High-strength bonding eliminates weak points, absorbs vibrations	✓ Stronger than timber but still relies on rivets & screws that can loosen	✗ Timber frames weaken over time, especially in off-road conditions
Off-Road Performance	✓ Built to handle corrugated roads with no movement or screw failure	✓ Lightweight, but riveted joints can work loose over time	✗ Timber can flex, leading to cracking & structural issues
Weight	✓ Lightweight composite panels improve towing efficiency	✗ Heavier than bonded sandwich panels	✗ Heavier due to timber frame & cladding layers
Weatherproofing & Insulation	✓ Fully sealed structure for superior insulation & dust-proofing	✓ Resistant to moisture, but not as well-sealed as bonded panels	✗ Susceptible to water damage & leaks over time
Maintenance Needs	✓ Low—no screws to tighten, no gaps to seal	✗ Aluminium screws & rivets can loosen, requiring regular maintenance	✗ Requires ongoing maintenance for frame integrity & sealing
Longevity	✓ Designed to last decades with minimal upkeep	✓ Lasts longer than timber, but requires ongoing frame inspections	✗ Timber weakens over time, reducing longevity

why frameless bonded sandwich panels are superior.

- Zero timber – No risk of rot, water damage, or warping.
- No screws or rivets – Eliminates weak points that loosen over time.
- Stronger than aluminium – Bonded panels distribute weight evenly, reducing stress points.
- Best for off-road & full-time travel – Withstands corrugations, impacts, and extreme climates.

stronger, lighter, adventure-ready.

bonded construction vs. traditional screw-fixed caravans

FEATURE	KOKODA BONDED CONSTRUCTION	TRADITIONAL SCREW-FIXED
Overall Strength	High-strength bonding creates a rigid, durable structure	Screws and rivets loosen, causing movement & instability
Off-Road Durability	Absorbs shocks & vibrations, reducing internal wear	Screws shake loose, requiring maintenance after rough travel
Maintenance Needs	Minimal—no screws to tighten, less wear over time	Requires frequent tightening & repairs
Insulation & Sealing	Seamless construction for better insulation & dust protection	Screwed panels create gaps for heat, dust, and water ingress
Longevity	Designed to last longer with fewer structural issues	More prone to wear, squeaks, and ongoing maintenance

faq's about caravan construction

What is the best caravan construction method for off-road travel?

Frameless bonded sandwich panels are the best choice for off-road caravans, offering superior strength, reduced maintenance, and better insulation than both timber and aluminium frame caravans.

What are the downsides of timber-framed caravans?

- Timber frames are prone to water damage, rot, and warping.
- Heavier than modern materials, increasing towing weight.
- Weaker in off-road conditions, with frame flexing leading to structural issues.

If something happens to my caravan panels, how easy are they to repair?

Repairs are simple—any qualified caravan repairer can fix the panels using standard methods, with no need for specialist equipment.

Is aluminium or bonded construction better?

Bonded sandwich panel construction is lighter, stronger, and requires less maintenance than aluminium-framed caravans, which still use screws and rivets that can loosen over time.

Does bonded construction make a caravan lighter?

Yes! Kokoda's frameless bonded panels are lighter than traditional builds, making towing easier and reducing fuel consumption.

final thoughts: why this construction method matters

With Kokoda's frameless bonded construction, you're investing in a stronger, lighter, and more reliable caravan that's built to handle Australia's toughest roads - without the maintenance headaches of traditional builds. If you're looking for a caravan that can go further, last longer, and provide better comfort, Kokoda's bonded sandwich panel technology is the clear choice.

the power of seamless construction.

upgraded, updated & unapologetically better.

the Kokoda you love — now evolved.

Australian made & owned.

the price family

Kokoda Caravans is proudly Australian-made, owned and operated by the Price Family, who bring decades of experience in local Australian manufacturing and a lifelong passion for off-road travel.

Before taking ownership of Kokoda in 2019, they operated Rowville Horse Trailers, a premium brand known for quality and innovation. They pioneered the Equivan - the first horse float and caravan hybrid - showcasing their ability to blend durability with comfort.

This expertise ensures every Kokoda Caravan is built to withstand Australia's toughest conditions while providing home-like experience.

a family legacy

At the heart of it all is the Price family, whose unwavering commitment to quality, innovation, and customer experience has propelled Kokoda to the forefront of the caravan industry.

For the Price family, Kokoda is more than a business; it's a mission to redefine off-grid adventure.

Their philosophy is simple: Build for Real Adventurers. As passionate travellers themselves, they design every van with firsthand experience and no compromises.

meet the owner Trevor Price

Trevor Price, at the helm of Kokoda, brings a fierce dedication to pushing the boundaries of what's possible in off-road and off-grid caravanning.

His leadership has driven Kokoda to consistently innovate, ensuring that every model delivers the perfect balance of rugged strength and refined luxury. With a background in business, engineering and an unshakable entrepreneurial mindset, Trevor has ensured that Kokoda remains ahead of the curve, not just meeting customer expectations, but redefining them.

strength, passion & pride

Built with strength, crafted with passion, and delivered with pride—every Kokoda Caravan is designed to take you further, handle every adventure with confidence, and make life on the road effortlessly comfortable.

our factory

built with quality, in Melbourne

Kokoda proudly designs and manufactures luxury off-grid caravans, all in-house, right here in Campbellfield, Victoria. Our Australian factory is the beating heart of our operation, where you can trust that every caravan is crafted to handle Australia's toughest conditions. Initially outsourcing production in 2011, manufacturing was brought in-house to ensure the highest standards of innovation and quality. Today, our state-of-the-art, fully-owned factory integrates cutting-edge technology, including 3D CAD designs, CNC machinery and 3D printing, enabling precision at every stage.

manufacturing a hands-on approach

Every Kokoda Caravan is built in-house. Our expert team oversee the entire process, guaranteeing your van meets the highest industry standards before it leaves our factory.

Our expert team includes:

- Local chassis specialists – Ensuring a rock-solid foundation for durability and off-road performance.
- Electrical and plumbing professionals – Seamlessly integrating wiring, appliances and plumbing for a seamless experience.
- Carpentry and interior fit-out teams – Creating modern and functional living spaces.
- Quality control specialists – Rigorously checking each caravan before delivery to our customers.

factory direct servicing and repairs

The service and support you receive after purchase is just as important as the build itself.

Our Melbourne factory provides direct servicing, maintenance and repairs, handled by the same experts who built your van.

We also have a trusted network of approved service providers across Australia, ensuring expert support wherever your travels take you.

a customer first-approach, every step of the way.

Buying a caravan is a big decision, and we're here to support you before, during, and after your purchase. Whether you have questions, need servicing, or just want some travel tips, our team is always here to help. We're committed to making your Kokoda experience second to none.

built locally, trusted nationally.

keeping you on the road

Your caravan should be the least of your worries. That's why we back every Kokoda Caravan with a 3-year warranty and nationwide servicing support, so you can focus on making memories, not maintenance.

Whether it's routine servicing, troubleshooting or repairs, our team is here to help you keep exploring Australia with confidence.

dedicated support team

- Proudly Australian-Made – Designed and manufactured in Melbourne, built for Australian conditions.
- Nationwide 3-Year Warranty – Providing peace of mind wherever your travels take you.
- Dedicated Support Team – Our experts are always available to assist with servicing, maintenance, and repairs.
- With decades of experience serving customers across Australia, we understand what it takes to provide a best-in-class ownership experience.
- We strive to go above and beyond, ensuring your caravan ownership is as easy and stress-free as possible.

service that protects your investment.

Your Kokoda will remain road-ready with a minor service at 3 months and a major service every 12 months. Regular servicing keeps your caravan performing at it's best, ensuring safe and worry-free travel for years to come.

- Servicing Options - Kokoda Caravans can conduct your services, or you can use one of our approved service partners nationwide
- Approved Service Partners - If servicing away from a Kokoda-approved provider, you should contact us before servicing to ensure they meet our high standards
- Service Checklist - We provide a detailed checklist to guarantee all key components are inspected, ensuring your van remains in top shape
- Regular maintenance means worry-free travel, letting you focus on the adventure ahead.

nationwide repair network

Even the best caravans need attention from time to time. If you need repairs, our nationwide network of trusted repairers will get you back on the road quickly, so the adventure never stops. With years of experience working on Kokoda Caravans, they'll get you back on your journey as quickly as possible. Need help finding a repairer? Get in touch with us, and we'll connect you with the right expert.

backed by warranty, built for peace of mind.
